

Testing Your Products For PAHs Now !

Ref: CHE26/200601

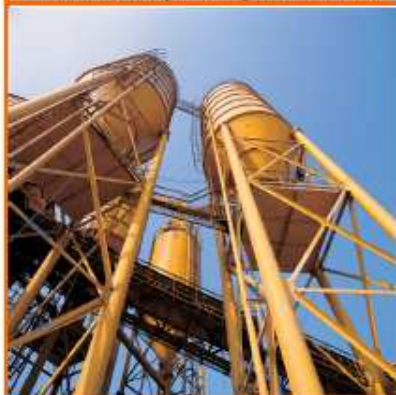

What are PAHs?

Polycyclic aromatic hydrocarbons (PAHs) are a group of over 100 different chemicals which are formed during the incomplete burning of coal, oil and gas or other organic substances like tobacco or charbroiled meat. Pure PAHs usually exist as colourless, white or pale yellow-green solids.

Why the concerns over PAHs have been raised recently?

The story began when some electrical products, which worth over 80 million US dollars, were found excessively high in PAHs content. All the concerned goods were subsequently refused to enter the German market and removed from the shops immediately.

PAHs test offered by CMA Testing

As your reliable quality solution partner, CMA Testing is now providing **16 PAHs** testing services as listed by the Environmental Protection Agency (EPA). By leveraging our expertise and extensive experience in PAHs testing services, we assist to ensure that your product is compliant to be marketed.

What products should be tested for PAHs ?

Products with coloured plastic and rubber components such as toy hammers, plugs, handles, etc. or products with oily ingredients such as lubricants, tyre, etc. should also be tested for PAHs.

How can PAHs affect my health?

Animal studies have shown that PAHs can cause harmful effects on the skin, body fluids, and ability to fight disease after both short and long term exposure. Some people breathed in or touched mixtures of PAHs for long period of time are found to suffer from cancer.
